EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Rosemary Pike on 03/11/04.

The application has been amended as follows:

- In claim 17
 - line 3, before "said substrate" insert – said top side of –
 - line 5, change "over an insulating layer in said active region" to – in said active region on said top side of said substrate –
 - line 16, change "does not penetrate to said scribe line" to – does not completely penetrate through said substrate –
- In claim 19,
 - line 4, change "with said at least one pair of second bond" to – and said at least one pair of second bond --
- In claim 21,
 - line 3, before "said substrate" insert – said top side of –
 - line 5, change "over an insulating layer in said active region" to – in said active region on said top side of said substrate –

line 17, change "does not penetrate to said scribe line" to – does not completely penetrate through said substrate –

- In claim 22,

line 4, change "with said at least one pair of second bond" to – and said at least one pair of second bond –

2. The following is an examiner's statement of reasons for allowance: Recorded Prior Art fails to teach a method for fabricating a planar inductor in high-performance high-frequency semiconductor circuits comprising steps of: forming a scribe line penetrating through said passivation layer overlying said passive surface to said passive surface and separating said at least one pair of planar inductors; attaching a glass panel to said passivation layer; cutting said substrate from said bottom side, said cutting being aligned with said passive surface of said substrate, said cutting not completely penetrating through said substrate; thereafter removing from said bottom side all of said substrate material underlying said passive surface of said substrate, exposing at least one first bond pad created on said passive surface on each side of said scribe line; and cutting said glass panel in alignment with said scribe line as characteristic in claim 1. Recorded Prior Art also fails to teach a method for fabricating a planar inductor in a semiconductor circuit comprising: providing a substrate wherein a scribe line is formed through the passivation layer and the dielectric layer to the

substrate in the passive region wherein said scribe line separates each of the pairs of first bond pads and second bond pads; attaching a glass panel to the passivation layer; cutting said substrate from the bottom side in alignment with the scribe line wherein said cutting does not completely penetrate through said substrate; thereafter removing all of said substrate from said bottom side in said passive region thereby exposing at least one pair of first bond pads from said bottom side; and thereafter dicing said substrate along said scribe line as characteristics in claims 17 and 21.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanhha Pham whose telephone number is (571)- 272-1696. The examiner can normally be reached on Monday and Thursday 9:00 AM - 9:30 PM.
